Subject: Request for 3D Printing of Components for Robotic Arm Project

Respected Sir,

We, the members of **Livity Labs**, As part of the mechanical development of our project, we have designed several robotic arm components using **Fusion 360**.

We kindly request permission to **3D print the designed components using the available 3D printer in the laboratory**. The printed components will be used to assemble and test the robotic arm and to evaluate the mechanical fit, servo mounting, joint movement, structural strength, and overall functionality of our design.

We will ensure that the components are printed according to the required specifications and will use the laboratory equipment responsibly.

We would be grateful if you could approve our request and allow us to proceed with the 3D printing of the required components.

Thank you.

Yours sincerely,
Team Livity Labs
